PROFILE

Computer Engineering student at Madhuben & Bhanubhai Patel Institute of Technology with practical experience building in web applications, including a deadline risk prediction tool, an early-warning climate-health dashboard, and a real-time typing assessment platform. Skilled in bridging clean, responsive frontend interfaces with functional backend logic using HTML, CSS, JavaScript, and Python. Passionate about applying web development concepts to create user-friendly software solutions that address real-world challenges.

EDUCATION

B.Tech in Computer Engineering

Madhuben & Bhanubhai Patel Institute of Technology, CVMU, Gujarat

Current CGPA: 8.15 (Till 5th Semester)

Higher Secondary School

Kasturba Kanya Vidyalaya, Anand

Percentage: 61.69%

Secondary School

Kasturba Kanya Vidyalaya, Anand, Gujarat Board

Percentage: 83.66%

TECHNICAL SKILLS

- **Frontend:** HTML5, CSS3, JavaScript, Bootstrap, Responsive Design
- **Backend & Database:** Python, Flask, MongoDB
- **Programming Languages:** Javascript, Python,
- **Tools:** Git, GitHub, VS Code
- **Concepts:** DS, Web Development, Basic Data Analysis, DBMS
- **SoftSkills:** Time Management, Team Collaboration, Problem-Solving, Continuous Learning

PROJECTS

Smart Deadline Risk Prediction System (HTML, CSS, JS + Python Flask)

Developed a Smart Deadline Risk Prediction application using Python Flask, HTML, CSS, and JavaScript to help students effectively manage academic workloads. Implemented a predictive mathematical algorithm that calculates a unique risk score—classified as Low, Medium, or High—based on task difficulty, days remaining, and current workload. Enhanced academic time management by engineering a 3-layer architecture with dedicated Admin, Faculty, and Student modules featuring personalized dashboards. Improved task completion rates through automated reminder logs and real-time visual risk indicators. Designed a structured database using SQLite to securely handle user interactions, task tracking, and resource attachments.

Climate-Health Early Warning System (Python + JavaScript + MongoDB)

Developed the climate-health early warning system for stay safe from climate-related health risks. Implemented data processing pipelines using Python and MongoDB to combine weather, air, water, and disease data. Increased public health awareness by engineering an interactive web application with JavaScript that features color-coded risk heatmaps and gamified awareness modules. Improved proactive health responses by generating automated notifications for upcoming disease risk zones.

Type Master – Interactive Typing Platform (HTML, CSS, JavaScript, Python)

Developed the Type Master web application using HTML, CSS, JavaScript, and Python to provide users with real-time feedback on their typing performance. Implemented dynamic frontend logic using JavaScript to track keypresses against original text, instantly calculating Words Per Minute (WPM) and accuracy percentages. Increased user engagement by designing a lightweight, responsive interface that features distinct difficulty levels (Easy, Medium, Hard) alongside modern CSS styling and neon glow effects. Improved progress tracking by integrating a Python Flask backend to log data and store high scores for continuous user evaluation.

CERTIFICATIONS

- IBM SkillsBuild - AI Tutorial: Completed introductory artificial intelligence learning resources and gained exposure to basic AI concepts.
- Completion for the AWS Academy Graduate - Cloud Foundations - Training Badge.

EXTRACURRICULAR & ACADEMIC ACTIVITIES

- **ISTE** Design Team Coordinator
- Participated in the Smart India Hackathon (SIH) 2025 under the HealthTech theme, developing an AI-powered Climate-Health Early Warning System.
- Participated in the CVMU Hackathon 2025 to develop "Flavour with Fusion," a secure, AI-driven smart recipe generator and personalized meal planner.
